

Kindergarten – Grade 8 Saskatchewan Curricular Links for Digital Citizenship

*Themes apparent throughout the curriculum which led to the following links include the consideration of 'Identity' and self (which should now include a digital element due to sharing some of 'who they are' online). Additionally, there are links to how people's wants and needs are met (more and more through social interactive spaces online in different forms of communities), more specifically, how **communities** are formed and function- and the power individuals have over how communities function. Finally, there are common themes considering what is important in **healthy lifestyles** that individuals can make (which due to ergonomics, hearing, activity levels, and as far reaching as safety) can all be linked to our 'technology rich' lifestyles.*
